

Table 10: EM pooled panel. Specification: $y_{i,t} = a_i + b \mathbf{1}\{\text{state}\}_{t-1} + e_{i,t}$, with y the spot change or the total return as labelled and the state the IYC signal, the naive synchronized-inversion count, or that count restricted to inversions at most six months old (currency fixed effects; t_{ep} clustered by state run; wild bootstrap on state runs).

Pooled specification	b	t_{ep}	wild p	N
Signal, spot	-14.37	-1.88	0.104	2534
Signal, total	-13.35*	-2.04	0.079	2533
Naive count, spot	-4.54	-1.08	0.359	2534
Naive count age ≤ 6 , spot	-3.92	-0.52	0.766	2534
