

Table F.1: Headline cells with the U.S. included in the signal count and/or the portfolio. State regressions $y_t = a + b \mathbf{1}\{\text{signal}\}_{t-1} + e_t$; wild bootstrap p on signal runs, $B = 9,999$; no controls (the controlled versions are in the replication package).

Portfolio	Signal	Leg	b	t_{run}	wild p
G10 carry	Baseline (9 curves)	spot	-12.85^{***}	-3.03	0.001
G10 carry	Baseline (9 curves)	total	-11.31^{***}	-2.40	0.003
G10 carry	+US curve (10)	spot	-11.72^{***}	-2.92	0.001
G10 carry	+US curve (10)	total	-10.20^{***}	-2.34	0.006
Dollar-incl.	Baseline (9 curves)	spot	-13.11^{***}	-2.69	<0.001
Dollar-incl.	Baseline (9 curves)	total	-11.54^{***}	-2.15	0.009
Dollar-incl.	+US curve (10)	spot	-12.10^{***}	-2.68	0.001
Dollar-incl.	+US curve (10)	total	-10.57^{**}	-2.14	0.013
Signal months: baseline (9 curves) 92, +US curve (10) 101, overlap 92; USD sits in the funding leg 31% of months
